

Sauce Labs Opens Delhi R&D Hub to Advance AI-Driven Test Automation

Category: Business

written by News Mall | February 4, 2026

Sauce Labs Inc., the leading provider of continuous software quality solutions, today announced the opening of its new office in Delhi, India. This expansion serves as a cornerstone of the company's global strategy to harness premier talent for the next generation of AI-driven software quality.

The Delhi office will be led by Anupam Jain, who will oversee the location's growth and integration into Sauce Labs' global engineering efforts. Established as a high-impact R&D office, the center is specifically tasked with advancing Sauce Labs' AI-based autonomous test authoring and intelligence capabilities to better serve regional and global customers.

"Our presence in Delhi is a strategic commitment to innovation in our platform," said Prince Kohli, CEO of Sauce Labs. "In my career, I've found that the most complex problems aren't solved by staring at a screen for 80 hours a week—they are solved when you continue to hire the smartest people and give them the space to collect their thoughts. Our Delhi team will be co-architects of our vision of eliminating the crushing burden of test creation, test execution, test maintenance and release automation on software developers and app creators."

The Delhi R&D hub is already recruiting premier talent in software engineering and data science to help global brands manage the complexities of modern, AI-generated code. The move

underscores Kohli's leadership philosophy of "staying human" to achieve peak professional results.

"At Sauce Labs, we know that great innovation requires both hard work and the mental space to think big. By establishing a home in India, we are bringing together some of the brightest minds in the industry. I'm excited to build a culture here rooted in trust and autonomy-one where our team has the freedom to do their best work and lead the charge in AI-driven testing," added **Kohli**.

About Sauce Labs

Sauce Labs is the leading platform for continuous quality, trusted by the world's top enterprises – like Walmart, Bank of America, and Indeed. Billions of tests run on the Sauce Labs platform, and hundreds of thousands of users depend on Sauce Labs to help them quickly deliver the highest quality software experiences. Our unified platform powers continuous quality across the SDLC – using AI-driven analytics to identify key quality signals from development through production. With over a decade of expertise and deep roots in the Selenium and Appium open-source communities, Sauce Labs helps teams test on thousands of different devices, browsers, and operating systems – anywhere, any time, and at any scale.
