

Sunstone Launches ALTA School of Technology – AI-First Computer Science Program

Category: Business

written by News Mall | February 4, 2026

In a bold move to redefine engineering education in India, Sunstone today announced the launch of **ALTA School of Technology**, an AI-First Computer Science program built to bridge the massive gap between traditional engineering education and real industry requirements.

ALTA is the evolution of **Sunstone Select**, which was originally launched in **2023** as an experiential engineering initiative by Sunstone. Over the past **three years**, Sunstone Select has successfully enrolled **600+ students** across partner campuses, validating the need for a new-age, industry-aligned engineering model. Building on this proven foundation, the program now takes a sharper, future-ready identity as **ALTA School of Technology**.

Every year, over **1.5 million engineers graduate in India**, yet less than **10% possess the hands-on skills** required for AI-driven and product-based roles. ALTA is built to change that.

“Sunstone Select showed us that students thrive when education is aligned with real industry practices. ALTA is the next evolution – AI-first, project-first, and future-first,” said **Ashish Munjal, Founder of ALTA and Co-Founder & CEO of Sunstone.**

What Makes ALTA Different?

ALTA is not a conventional UG Computer Science program. It is an **AI-First, build-from-day-one Computer Science journey** delivered in partnership with UGC/AICTE-approved institutes across India.

From Coder to Hired – Built Into the Curriculum

Unlike traditional colleges where placements are an afterthought, ALTA integrates career readiness into everyday learning through:

- Competitive coding culture (LeetCode, ICPC, GSoC)
 - Mock interviews with MAANG mentors
 - Portfolio-driven hiring approach
 - 1000+ recruiting partners across product companies, startups, and unicorns
-

Students at ALTA:

- **Get free access to GPT, Claude, Gemini and 15+ AI tools**
- **Learn directly from MAANG engineers and industry practitioners**
- **Build and deploy 20+ real projects with live users**
- **Graduate with a GitHub portfolio stronger than a resume**
- **Complete a 6-month internship before graduation**
- **Unbox a MacBook on Day One**

Built on a Proven Foundation

Since its launch in **2023**, Sunstone Select has enrolled **600+ students** and demonstrated how experiential learning, industry mentorship, and project-based outcomes can dramatically improve engineering readiness.

ALTA carries forward this legacy with a more focused identity dedicated entirely to AI-driven Computer Science education.

“Our vision is simple, match the right students with the right learning, tools, and mentorship so they graduate industry ready from Day One,” said **Harshit Agarwal, alum of IIT BHU, ISB – Director – Program at ALTA.**

Scholarships & Nationwide Rollout

Admissions are now open for the 2026 batch across partner campuses. Students can apply through the ALTA Scholastic Aptitude Test (A-SAT) and are eligible for scholarships up to **100% tuition support** based on merit and performance.

About ALTA School of Technology

ALTA School of Technology is an AI-First engineering education initiative by Sunstone, designed to create India’s next generation of product engineers, AI builders, and tech founders through experiential, industry-aligned Computer Science education.
